

EDUCATION

UNIVERSITY OF INFORMATION AND TECHNOLOGY (UIT)

Ho Chi Minh, VietNam

Bachelor of Science in Computer Science

GPA: 3.5 (8.71/10)

TECHNICAL SKILLS

- **Program languages:** Python, SQL, C++, Java Script
- **Libraries:** NumPy, Pandas, Matplotlib, Scikit-learn
- **Frameworks:** PyTorch, TensorFlow, React, Nest js
- **Machine Learning Algorithms:** Linear Regression, Logistic Regression, KNN, Tree based model(Decision Tree, RandomForest), Dimensionality reduction
- **Deep Learning:** Neural Networks
- **Prompt Engineering:** Experienced with zero-shot, few-shot, chain prompting, and prompt injection to optimize GPT-based tasks.
- **Others:**
 - Strong teamwork and collaboration skills, high sense of responsibility, effective communication and presentation skills.
 - Time management and organizational skills, ensuring timely completion of tasks and efficient workflow.
 - Continuous learning mindset, keeping up-to-date with the latest advancements in AI models and technologies.
 - Achieved Academic Excellence awards across multiple semesters.

PROJECTS

Ielts prep web

- **Link project:** <https://github.com/tukitena/ielts-prep-web.git>
- Develop a web-based IELTS preparation platform that supports multiple roles: student, teacher, and admin, allowing students to participate in classes, take practice tests, and track their learning progress.
- Develop a mock test/exam room system that simulates the IELTS exam process for skills such as Listening, Reading, Writing, and Speaking, providing support for taking the test, submitting answers, grading, and announcing results.
- Design administrative functions such as user management, class management, exam management, exam room management, file upload management, and audit log management to support system operation on a multi-user scale.
- We utilize React + Vite + Tailwind CSS technologies for the frontend, NestJS + PostgreSQL for the backend, combined with Supabase Authentication/Storage, JWT, and Row Level Security (RLS) to ensure secure authentication and authorization.

Comparing the effectiveness of Logistic Regression, Support Vector Machine, and Neural Network in classifying sleep disorders based on health and lifestyle data.

- **Link project:** https://drive.google.com/file/d/1y3P3iD7fLqnPqU46d2NXFDJEdOL1_8pI/view?usp=drive_link
- **Dataset:** https://drive.google.com/file/d/1YgsJOKJ-49iZJ9Lw-W2qG8a8cM6gF0wZ/view?usp=drive_link
- Develop a sleep disorder classification system (No Disorder, Insomnia, Sleep Apnea) based on health and lifestyle data, including age, gender, occupation, sleep quality, activity level, blood pressure, heart rate, ...
- Perform data preprocessing: clean null values, group appropriate labels, handle outliers, extract features from the Blood Pressure column, and code categorical variables.
- Perform exploratory data analysis (EDA) with histograms, boxplots, correlation heatmaps, and label distributions to understand the distribution and influence of features.
- Compare the performance of three ML models: Logistic Regression, Support Vector Machine, and Neural Network using scikit-learn, StandardScaler, OneHotEncoder, pipeline, StratifiedKFold cross-validation, and handle imbalance with `class_weight='balanced'`.

CERTIFICATIONS & AWARDS

• TOEIC (4 Skills)

Speaking and Writing : 300

Reading and Listening : 615
